

IN THE CLAIMS:

- 1.(previously presented):A ~~perpetual motion energy~~ circuit for providing continuous or ~~perpetual motion~~ electric energy to propel electric vehicles comprising:
- 2.(previously presented):Two or more electric batteries for providing electric current to a, Electric Wire Distributor Connector.
- 3.(previously presented):A Electric Wire Distributor Connector, for transmitting electric current and amperes to a electric motor.
- 4.(previously presented):A electric motor for providing power, and rotating a electric generator.
- 5.(previously presented):A generator for transmitting electric current to ~~two~~ one or more batteries to charge the said batteries.
- 6.(previously presented):A above said, Electric Wire Distributor Connector, for recycling ~~one hundred percent or more~~ energy back to the above said batteries to recharge said batteries, ~~which is perpetual motion energy~~.
- 7.(previously presented):Above said, batteries do not have to be recharged by any other source.
- 8.(previously presented):Above circuitry for powering electric cars, or vehicles.
- 9.(previously presented):Above circuitry for providing electricity, and heat energy for residential and commercial buildings.
- 10.(canceled)

Although, the present invention has been described herein with respect to the preferred embodiment thereof, the forgoing description is intended to be illustrative, and not restrictive. Those persons skilled in the art will realize that many modifications of the preferred embodiment could be made which would be operable. For example ~~electric motion energy~~ All electric battery driven energy can be used in many commercial applications, and other types of transportation. For example we may some day explore outer space on airships propelled by ~~perpetual motion power~~ All electric battery driven energy.
